CERVICAL CANCER
Just the tip of the iceberg.

Screening won’t protect your patients from most cancer caused by HPV infection.

13,000

Even with screening, in the United States
women are diagnosed with cervical cancer each year.

CERVICAL PRECANCERS
Screening can detect cervical precancers, which may require additional invasive testing and treatment.
HPV vaccination can prevent most of this.

OVER 90%
of cancers caused by HPV are preventable through HPV vaccination

Cases every year

# CERVICAL PRECANCERS

~216,000 HIGH GRADE CERVICAL LESIONS
~468,700 LOW GRADE CERVICAL PRECANCERS

Cases every year

700 PENILE CANCER
3,100 VULVAR & VAGINAL CANCER
5,500 ANAL / RECTAL CANCER
11,600 OROPHARYNGEAL CANCER

Don’t rely on screening to catch it later.
Protect them now with HPV vaccination.
